CHAPTER 1

Welcome to Ferna Sundaree

Ferna Sundaree is a security-focused web browser for Windows and Linux. It is built on Chromium, the engine behind Chrome and Edge, so websites work as you expect. Three Ferna tools are built in: **Ferna Tabs** for organising tabs into workspaces, **Ferna PDF Reader** for reading and annotating PDFs, and **Ferna Screenshots** for capturing and marking up pages.

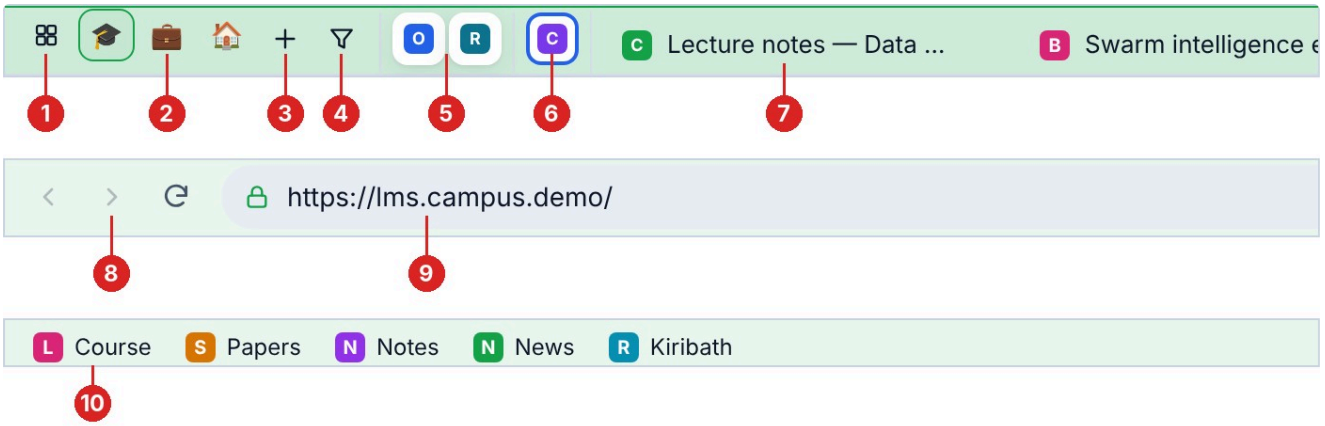

This manual explains how to use every part of the browser. To install it, see the separate installation guides for Windows and Linux. Menu paths are written like this: *Menu → Settings → General*. **Menu** is the ⋮ button at the right end of the toolbar.

The window at a glance

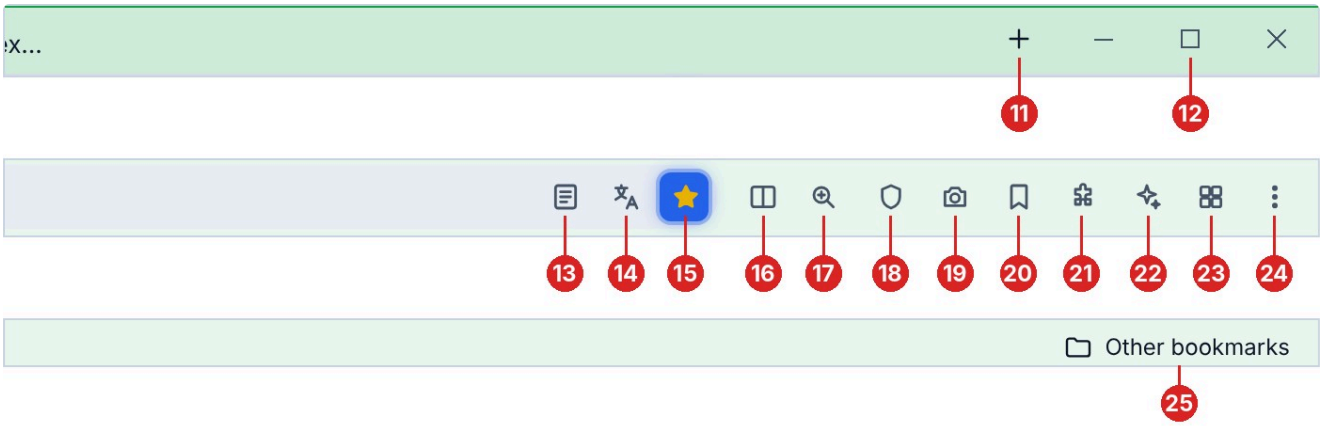

Ferna Sundaree with three workspaces. The *Study* workspace is open: its tabs, its pinned site and its green colour are shown.

The numbers below match the two close-ups on the next page.

Left side of the window.

1	**All tabs**: shows every open tab, whatever its workspace.	6	**Pinned sites** of this workspace (always at hand, shown as icons).
2	**Workspaces**, shown as icons. Click one to switch.	7	**Tabs** of the current workspace.
3	**New workspace**.	8	**Back, forward, reload**.
4	**Filter**: show only workspaces, favourites and pinned tabs.	9	**Address bar**: type an address or a search. The padlock shows a secure (HTTPS) connection.
5	**Common bar**: favourite sites available in every workspace.	10	**Bookmarks bar**.

Right side of the window. Some buttons appear only when they are useful, for example the key (saved passwords for this site) or Picture-in-Picture when a video plays.

11	New tab	19	Ferna Screenshots
12	Minimise, maximise, close (there is no title bar)	20	Bookmarks popup
13	Reading mode	21	Extensions
14	Translate this page	22	AI assistant
15	Bookmark this page (blue when the page is bookmarked)	23	Tab Overview
16	Split view	24	Menu
17	Zoom	25	Other bookmarks (bookmarks not on the bar)
18	Shield: tracker and ad blocking for this site		

> **Point at any button to see its name and keyboard shortcut**
>
> Every shortcut can be changed in *Menu* → *Settings* → *Shortcuts*. Chapter 16 lists them all.

CHAPTER 2

Everyday browsing

Open pages and search

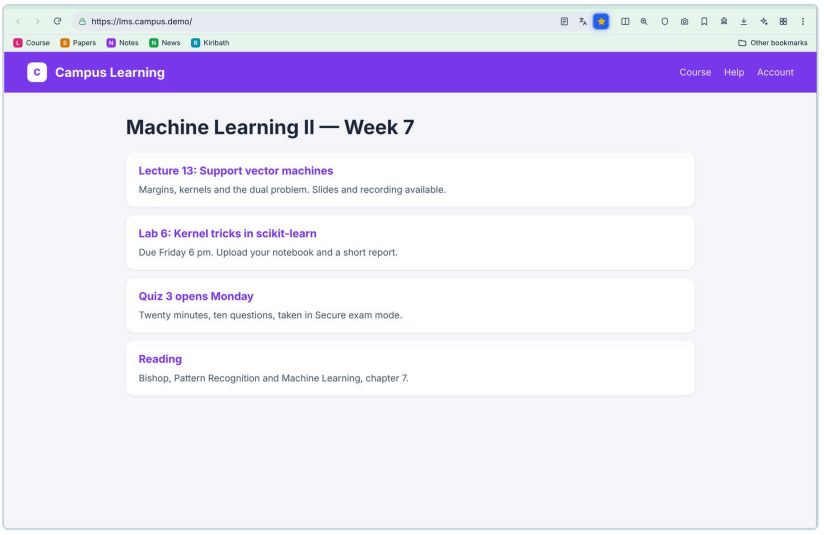

- Click the address bar (or press **Ctrl** + **L**), type an address such as `usj.ac.lk` or any words, and press **Enter**. Words are searched with your search engine (Google unless you change it in *Settings → General*).
- Ferna Sundaree tries the secure `https://` version of every address first and warns you before opening an insecure page.

Tabs

To	Do this
Open a new tab	**Ctrl** + **T** or the **+** button
Close a tab	**Ctrl** + **W**, the × on the tab, or a middle-click on the tab
Reopen a tab you closed	**Ctrl** + **Shift** + **T**
Move to the next or previous tab	**Ctrl** + **Tab** / **Ctrl** + **Shift** + **Tab**
Open a link in a new tab	**Ctrl** +click or middle-click the link
Rearrange tabs	Drag them; right-click a tab for more choices

Windows, private browsing and focus

- **New window:** **Ctrl** + **N**. **Private window:** **Ctrl** + **Shift** + **N**. A private window keeps no history, cookies or form data after you close it, and runs without extensions.
- **Private window with Tor** (*Menu → New private window with Tor*) sends the window through the Tor network. It needs Tor Browser or the Tor service running on the computer.
- **Focus mode** (**Ctrl** + **Shift** + **F**) hides every bar so only the page is visible. Press it again to bring the bars back.
- **Hide the tab bar** (**Ctrl** + **Shift** + **H**) gives the page more room. Rest the pointer on the top edge of the window to see the bars for a moment.

Tab bar hidden (Ctrl + Shift + H). The page uses almost the whole window.

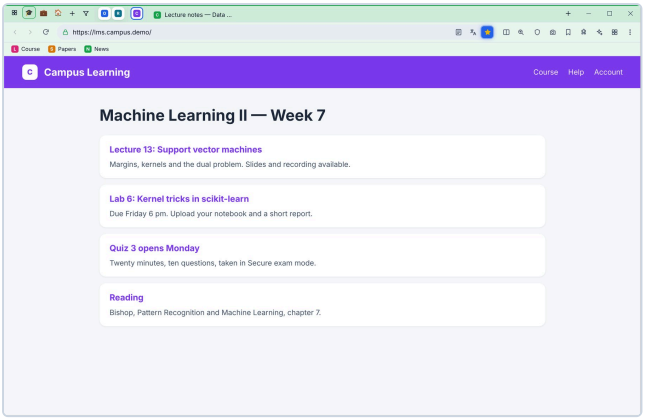

Find, print, save and zoom

- Ctrl + F finds text on the page. Ctrl + P prints. Ctrl + S saves the page. Ctrl + O opens a file from your computer.
- Ctrl + + and Ctrl + - zoom in and out, Ctrl + 0 resets. Chapter 5 explains the zoom panel.

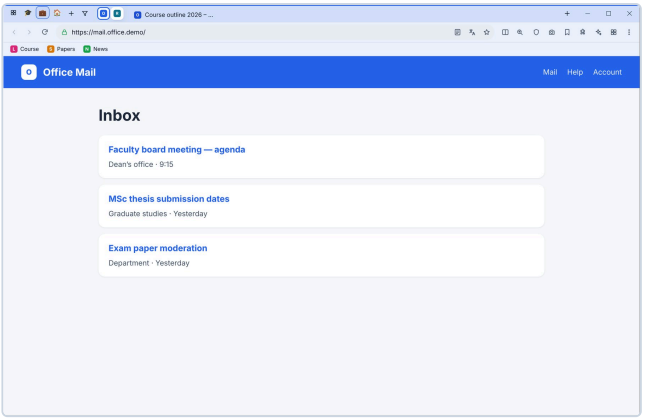

CHAPTER 3

Tabs and workspaces (Ferna Tabs)

Workspaces keep different parts of your life apart, such as Study, Work and Personal. Each workspace has its own tabs, pinned sites and colour, and you switch between them with one click.

Study workspace (green)

Work workspace (blue)

Create and arrange workspaces

1. Click **+** (New workspace) next to the workspace icons, type a name and press **Enter**.
2. Right-click a workspace icon to **Change icon…** (an emoji, letters or your own picture), move it, or open **Manage workspaces…**.
3. In *Settings* → *Workspaces*, choose each workspace's colour and the sites that belong to it. Type extra host names (for example `github.com`) one per line. Sites you pin in a workspace belong to it automatically, including their sub-domains.

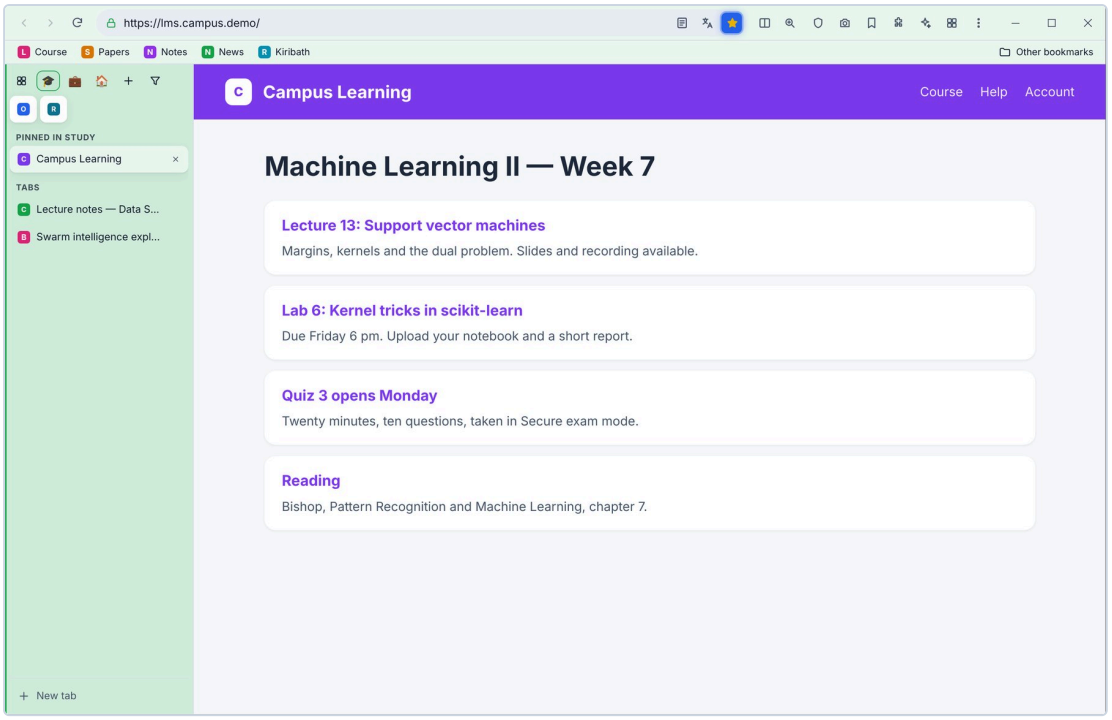

When you open a site that belongs to a workspace, its tab goes into that workspace. Switch workspaces by clicking their icons, or with **Alt** + **Shift** + **.** (next) and **Alt** + **Shift** + **,** (previous). The **All tabs** icon (the four squares) shows every tab together.

Common bar and pinned sites

- **Common bar**: favourites you want in every workspace, such as your e-mail. Point at a tab and click the ☆, or press **Alt** + **Shift** + **S**. The common bar can hold folders.
- **Pinned sites** belong to one workspace and stay there as icons. Point at a tab and click the pin, or press **Alt** + **S**. When **All** is selected, the tab is pinned in All tabs instead.
- The **filter** button (**Alt** + **Shift** + **P**) shows only workspaces, favourites and pinned tabs, for a calm tab bar. Other tabs stay open; reach them with Tab Overview or the list at the pointer.

Tab bar on top, left or right

Press Ctrl + Shift + , to move the tab bar between the top, the left and the right (or use *Settings → Tabs and bars*). A vertical tab bar can be resized by dragging its edge, and collapsed to icons with Ctrl + Shift + \.

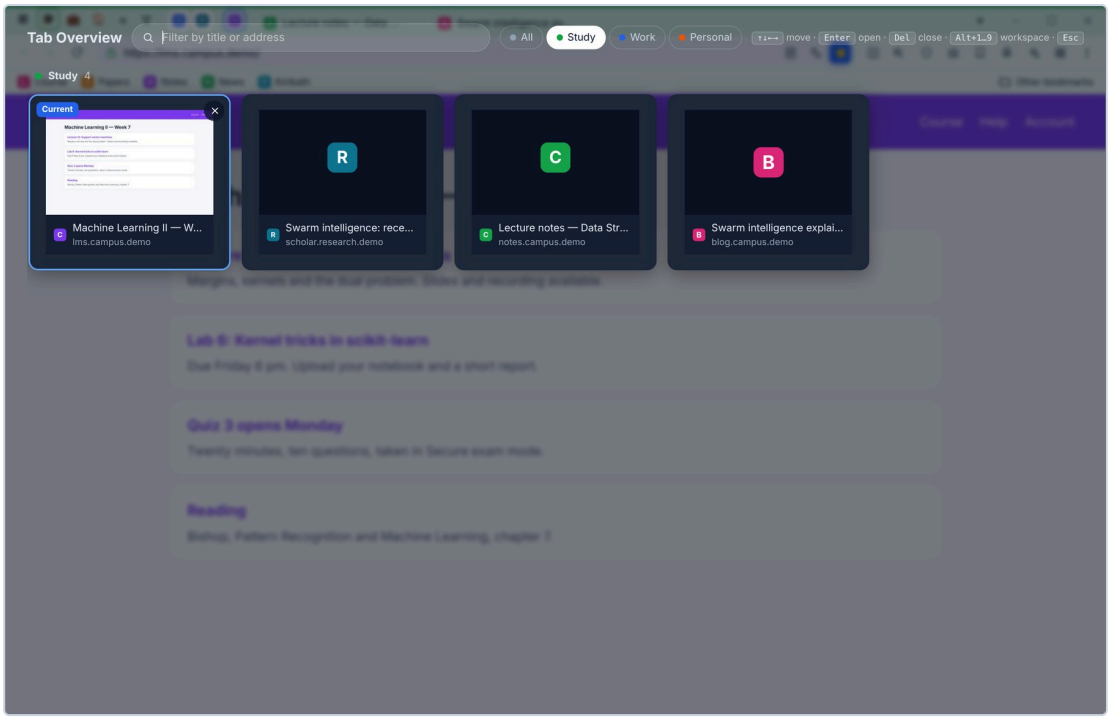

Vertical tabs on the left. Workspaces, the common bar and pinned sites sit at the top, and the window controls move to the toolbar.

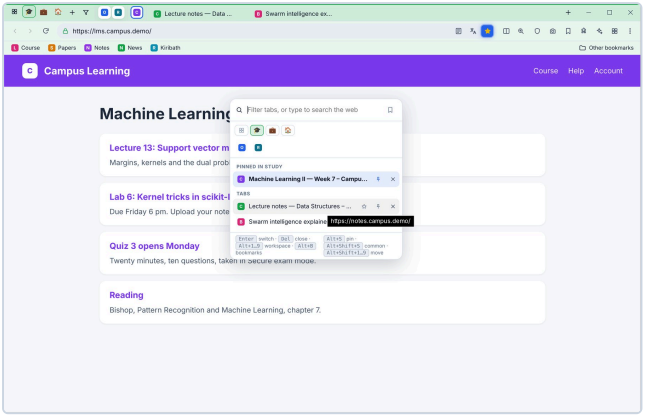

Find any open page

Three tools help when many tabs are open:

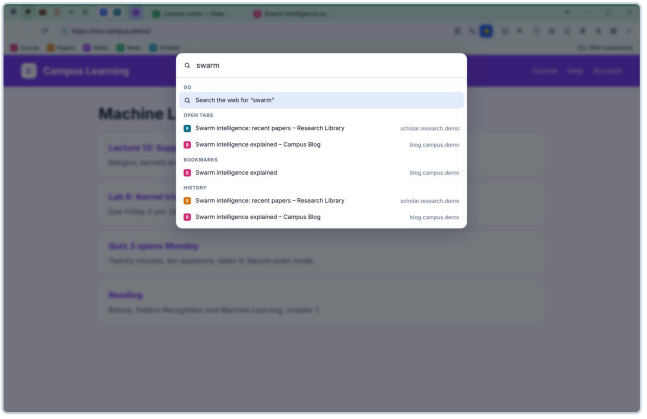

- **Tab Overview** (Ctrl + Shift + A): live thumbnails of every page, grouped by workspace. Click one to go there, or type to filter.
- **Tabs list at the pointer** (Alt + Shift + L): the Ferna Tabs list opens where your mouse is. Type to search tabs, then bookmarks. If nothing matches, it offers to open the address or search the web. Press Alt + B inside the list to browse bookmarks.
- **Command palette** (Ctrl + K): search tabs, bookmarks, history and browser commands in one box.

Tab Overview shows every open page with a live preview.

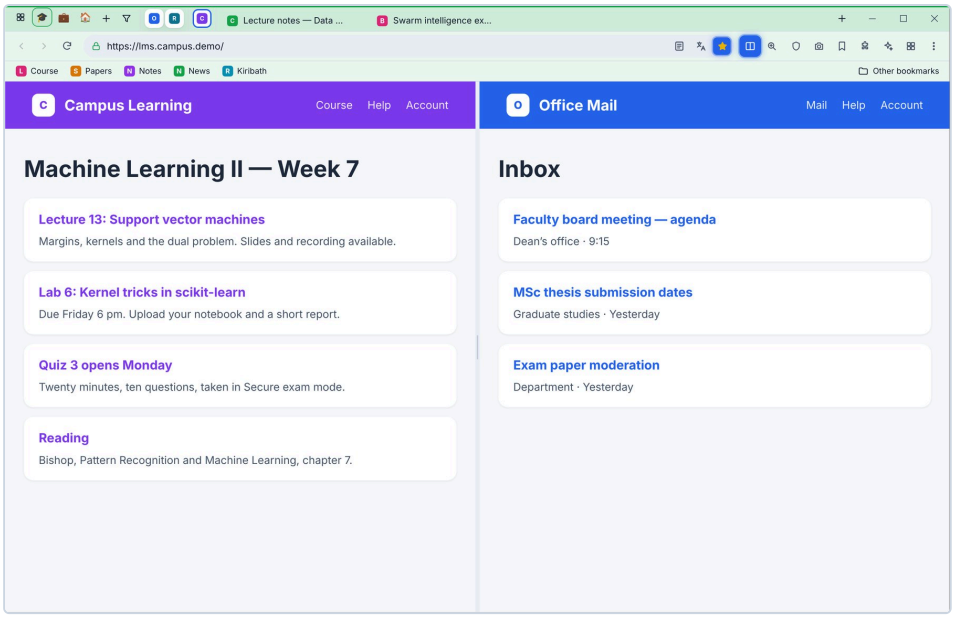

Tabs list at the pointer (Alt + Shift + L)

Command palette (Ctrl + K) searching for “swarm”

Split view and link preview

- **Split view** (Alt + Shift + D) shows two tabs side by side. Drag the divider to resize, double-click it for equal halves, and click a half to make it active. Right-click the split-view button to choose the second tab.
- **Link preview**: Shift +click a link (or right-click → *Preview link*). The page floats over the current one; keep it as a tab, put it in split view, or close it.

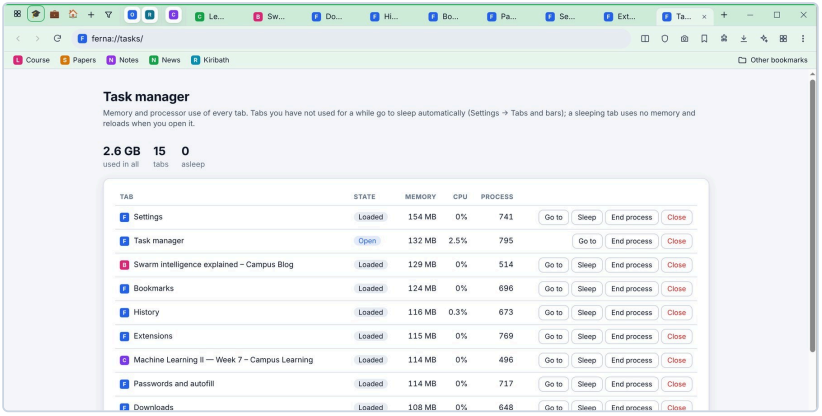

Split view: a course page and the mail inbox side by side.

Sleeping tabs and the task manager

Tabs you have not looked at for a while go to sleep to save memory and battery, and reload when you open them. Choose the time in *Settings* → *Tabs and bars*. Tabs that play sound, are in Picture-in-Picture or are marked *Keep loaded* never sleep.

The **Task manager** (<kbd>Shift</kbd> + <kbd>Esc</kbd>) shows the memory and processor use of every tab, with buttons to put a tab to sleep, end its process or close it.

Task manager: memory and CPU for each tab.

Separate logins and profiles

- **Workspace with separate logins**: right-click a workspace → *Separate logins*. Its tabs keep their own cookies, so you can be signed in to two accounts of the same site at once, for example a personal and a university Google account. A badge in the address bar shows it.
- **Profiles** are completely separate browsers, each with its own bookmarks, passwords and extensions. Create one in *Settings* → *Profiles and apps*; it gets its own desktop shortcut.

CHAPTER 4

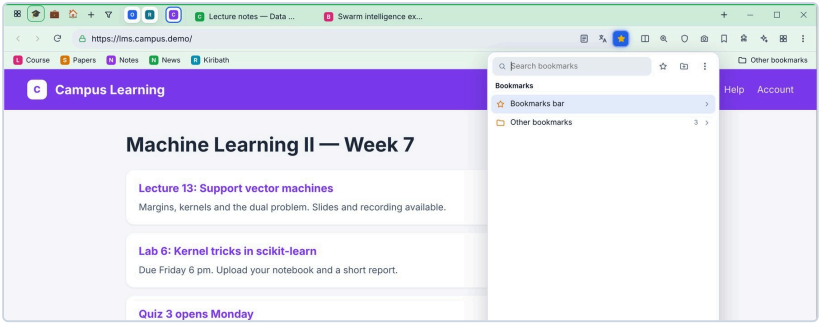

Bookmarks, history and downloads

Bookmark a page

Click the ☆ in the address bar or press Ctrl + D. Show or hide the bookmarks bar with Ctrl + Shift + B. Drag bookmarks on the bar to reorder them, or right-click one to edit or delete it.

Bookmarks popup

The bookmarks button (Ctrl + Shift + Y) opens a quick popup. Browse folders, search (results show their folder), open a bookmark in a new tab, this tab or the background, add the current page, make folders, rename, and drag to reorder. A deleted bookmark can be brought back with **Undo**.

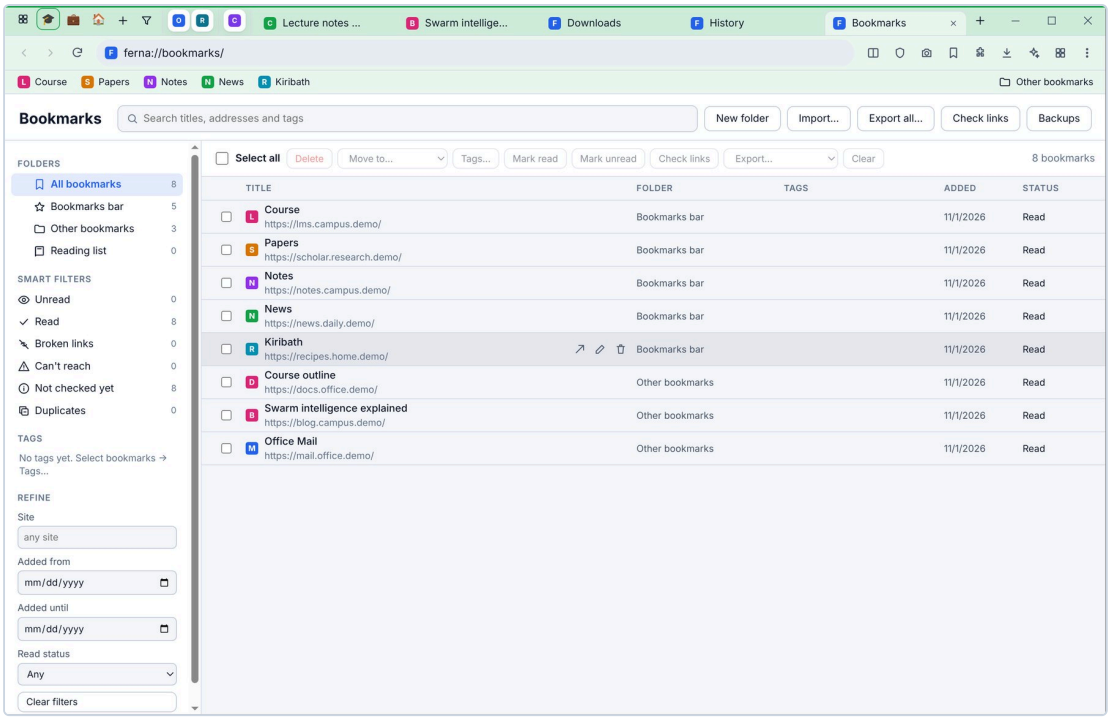

Bookmarks popup, also available inside the tabs list at the pointer.

Bookmark manager

Open it with Ctrl + Shift + O or *Menu → Bookmark manager*. It is built for tidying large collections:

- **Select many:** tick the boxes, Shift +click for a range, or Ctrl + A to select everything shown. Then delete, move, tag, mark as read, check links or export the selection. Deleting asks for confirmation with the number of bookmarks, and **Undo** brings them back.
- **Filters** on the left: folder, tag, site, date added and read status.
- **Check links** finds broken bookmarks and offers *Delete all broken*. **Duplicates** are found and merged in bulk, keeping their tags.
- **Import…** reads bookmarks from any browser. **Export all…** writes JSON or an HTML file other browsers can import.
- **Backups**: a JSON backup is made automatically (daily by default). Restore one by merging it into your bookmarks or by replacing them.
- **Reading list**: save pages to read later with Alt + R.

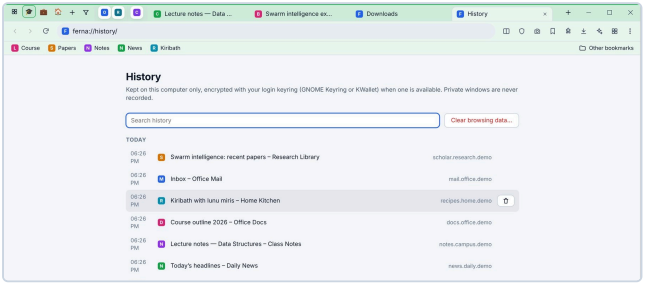

Bookmark manager with filters on the left and bulk actions above the list.

History

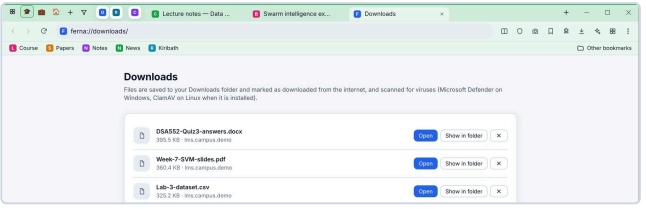

Ctrl + H opens your history, newest first, with a search box. History stays on this computer, encrypted, and private windows are never recorded. Choose how many days to keep in *Settings → Privacy and security*.

Downloads

Ctrl + J lists your downloads with **Open** and **Show in folder**. Files are saved in your Downloads folder. When each download finishes, it is scanned for viruses (Microsoft Defender on Windows, ClamAV on Linux when installed). A file with a threat is removed and you are told. Program files from the internet get an extra warning.

History, searchable and stored only on this computer.

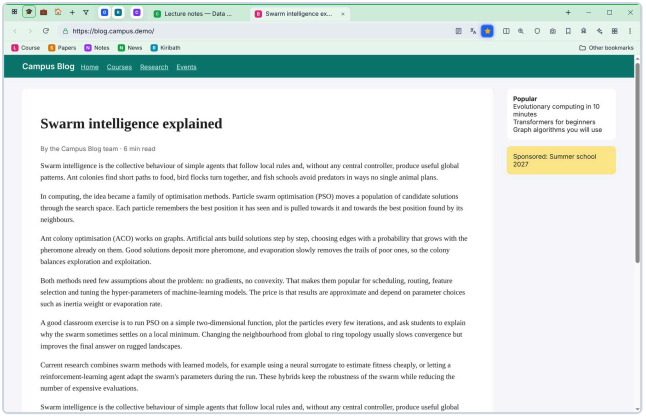

Downloads with virus-scan results.

CHAPTER 5

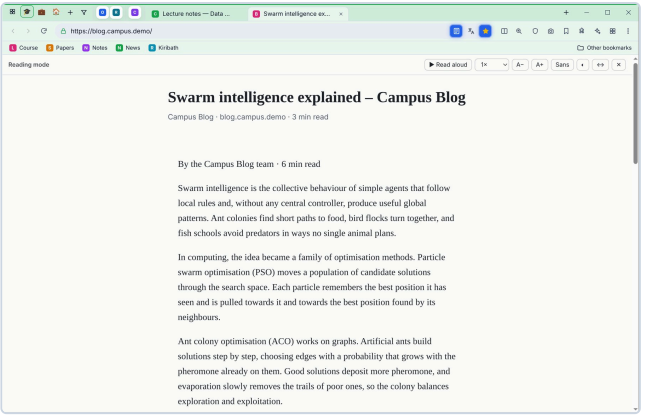

Reading, listening and watching

Reading mode and read aloud

Press F9 (or the page button in the toolbar) to show only the article: no menus, adverts or side bars. Choose the text size, font, line width and a light, sepia or dark page. **Read aloud** (Ctrl + Shift + U) speaks the article and highlights the paragraph being read.

A long article with menus, side bar and advert

The same article in **reading mode** (F9)

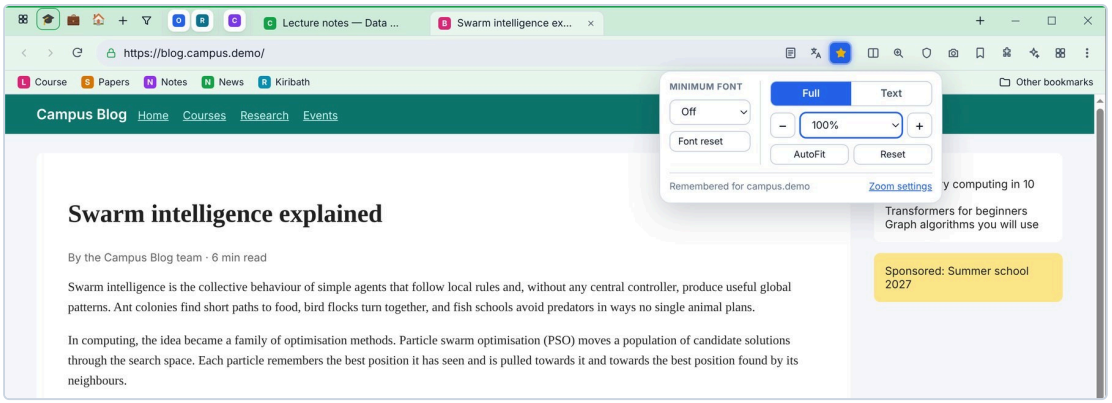

Translate

Translate the whole page with Alt + Shift + T or the translate button, or select text and choose *Translate*. Use Google Translate, or the AI assistant for private translation on your own computer (*Assistant settings → Translation*).

Zoom

The zoom panel (Alt + Z or the magnifier button) offers more than ordinary zoom:

- **Full zoom** scales everything; **text zoom** enlarges only the text and keeps the layout (Ctrl + Alt + 9 switches).
- **AutoFit** (Ctrl + Alt + 8) fits the page to the window width.
- A **minimum font size** makes small text readable everywhere (Ctrl + Alt + 7 resets it), and line spacing helps with text zoom.
- Zoom is remembered per site or per tab (*Settings → Zoom*).

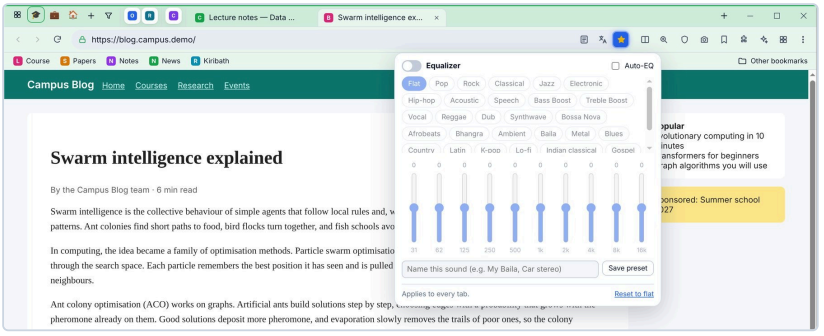

Zoom panel.

Picture-in-Picture and media controls

- **Picture-in-Picture** (Alt + P, the toolbar button, or right-click a video) moves a video into a small floating window that stays on top while you work. A playing video also follows you into Picture-in-Picture when you switch tabs (*Settings → Tabs and bars*).
- **Media controls** (Alt + M) list everything playing in every window, with play/pause, 10-second jumps, mute and *go to tab*.

Equalizer

The equalizer (Alt + Q) shapes the sound of any page with 10 bands and a limiter. Choose from 28 presets, from Pop, Rock and Classical to Reggae, Dub, Synthwave, Bossa Nova, Afrobeats, Bhangra, Ambient, Baila, K-pop, Lo-fi and Indian classical. **Auto-EQ** listens to the music and the page and picks a suitable preset by itself. Set the sliders the way you like and **Save preset** to keep your own; your presets appear with a ★, and you right-click one to delete it.

Equalizer with genre presets.

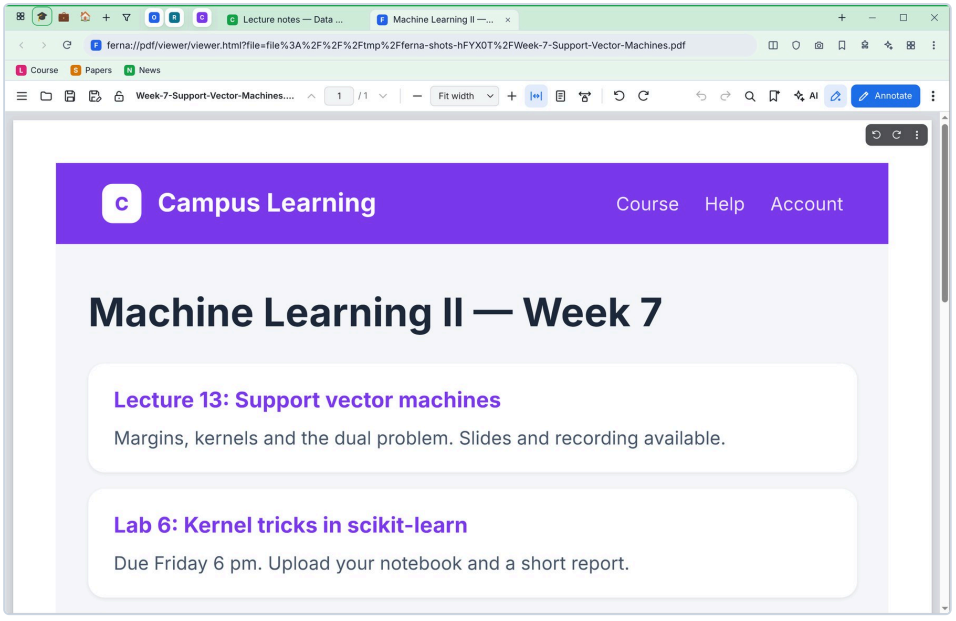

Text selection menu

Select text on a page and a small bar offers **Copy**, **Search** and, for an address, **Open**, plus *Translate*, *Read aloud* and *Ask the assistant*. Turn it off in *Settings → PDF and screenshots* if you prefer.

CHAPTER 6

Ferna PDF Reader

Every PDF opens in the built-in Ferna PDF Reader: links on the web, files you double-click (if Ferna Sundaree is your PDF viewer), or *Menu → Ferna PDF Reader*.

Ferna PDF Reader with a lecture handout.

Reading

- Each page fits the window width, even when pages have different sizes. Change it with **Fit width** (`W`), **Fit page** (`P`), a percentage, or `Ctrl` +mouse wheel.
- Rotate a page with `R` / `Shift` + `R` or the buttons that appear when you point at it. Rotations are saved into the PDF.
- The sidebar (`F4`) shows page thumbnails, the outline and all annotations. The horizontal lock (`L`) stops zoomed pages sliding sideways.
- Click a reference such as “Figure 3” or “Table 2” to see it in a floating card without losing your place.
- **Auto-Bookmark** builds a table of contents for PDFs that have none, in English or Sinhala.

Annotating

- Select text and a small bar offers five highlight colours, underline, strike-out, highlight with a comment, and copy.
- **Annotate** (`A`) opens the tools: highlight, area highlight, pen, marker, eraser, text box, sticky note, shapes, lines and arrows, with colour, thickness and opacity.
- With a pen or stylus you can write at any time without choosing a tool. The pen’s eraser end erases strokes.
- Click an annotation to change, comment on or delete it. `Ctrl` + `Z` / `Ctrl` + `Y` undo and redo.

Saving

Save (Ctrl + S) writes your annotations straight into the file you opened. A PDF from the web is saved as a copy in Downloads, and later saves update that copy. **Save As** (Ctrl + Shift + S) asks for a new name. Annotations are standard PDF annotations, so other PDF readers show them too.

AI help with documents

The AI button in the reader summarises the document, answers questions with page references, and makes quizzes (multiple-choice or short answer, with answers and explanations). It can run on your own computer.

CHAPTER 7

Ferna Screenshots

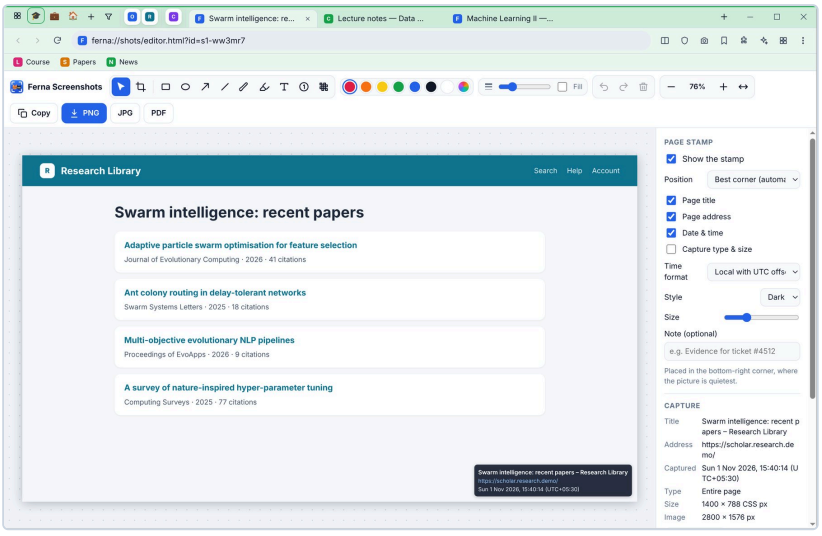

Take a screenshot

Click the camera button, or use the keys:

Capture	Keys	What it does
Visible area	Alt + Shift + V	What is on the screen now
Entire page	Alt + Shift + F	The whole page from top to bottom in one picture, including the parts you would have to scroll to
Select region	Alt + Shift + R	Drag a rectangle. You can scroll while selecting, so the region can be taller than the screen.
Select element	Alt + Shift + E	Point at a table, chart or post and click to capture all of it. ↑ / ↓ choose a larger or smaller part.

Edit and save

The editor opens after each capture. Crop; add rectangles, ellipses, arrows, lines, pen and highlighter marks, text and numbered steps; and blur or pixelate passwords and personal details. Marks can be moved, recoloured and deleted, with unlimited undo.

Screenshots editor with a full-page capture.

- Save as **PNG**, **JPG** or **PDF** to `Downloads/Ferna Screenshots`, or **Copy** to paste into a chat or document.
- An optional **stamp** adds the page title, address and the date and time, which is useful as evidence or for references.
- **Screenshot history** (*Menu → Screenshot → Screenshot history*) keeps your recent captures with their edits.

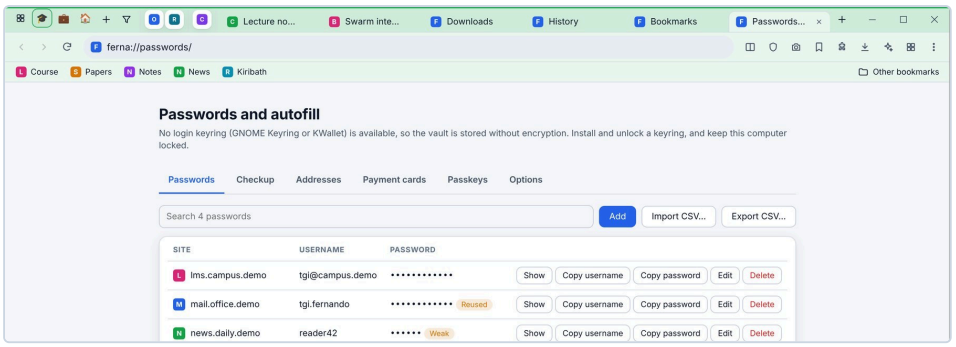

CHAPTER 8

Passwords and autofill

Ferna Sundaree has its own encrypted password manager. Open it from *Menu → Passwords and autofill*.

Save and fill passwords

- When you sign in to a site, a bubble offers to **save** (or update) the password.
- Next time, click the username or password field and choose your account from the list. Ferna Sundaree fills a field only after you click it, so a page cannot take your password secretly. A key in the address bar shows that passwords are saved for the site.
- When you create an account, Ferna Sundaree suggests a **strong password**.
- Showing, copying or exporting a password asks you to confirm it is you: Windows Hello on Windows, or your account password on Linux.

Passwords and autofill. The tabs above the list open the Checkup, addresses, payment cards, passkeys and options.

Checkup and warnings

- **Checkup** lists weak and reused passwords and, if you allow it, checks whether a password appeared in a known data leak. This uses a k-anonymity check: only the first characters of a scrambled form of the password are sent, never the password itself.
- If you type a saved password into a site you have never visited, Ferna Sundaree warns you, because that is how phishing works.

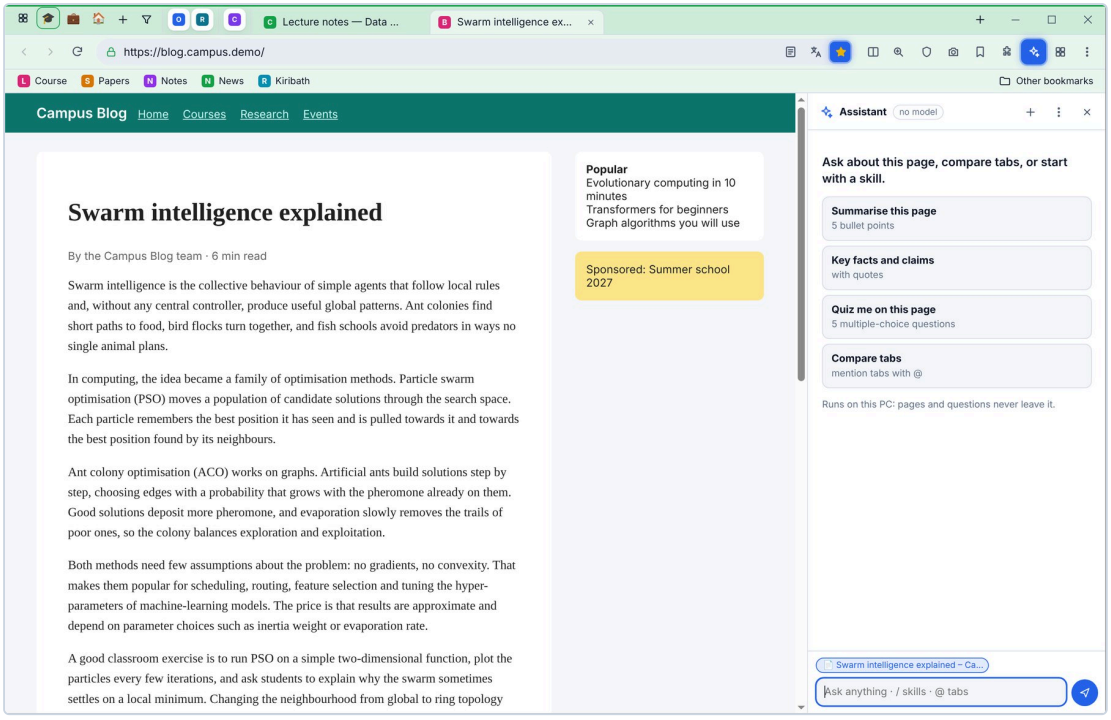

Addresses, cards, passkeys, import

- Save **addresses** and **payment cards** to fill forms. The security code (CVV) is never stored, and filling a card asks for Windows Hello or your password.
- **Passkeys** sign you in without a password, using your PIN, fingerprint, face, a security key or your phone.
- **Import CSV...** brings passwords from Chrome, Edge, Firefox, Safari, Bitwarden, LastPass or 1Password. **Export CSV...** writes them out. Delete exported files afterwards, because they are not encrypted.

CHAPTER 9

AI assistant

The assistant (Alt + A) opens in a side panel. It can read the page you are on, your other tabs and any text you select.

AI assistant beside an article, with suggested actions.

Set it up

Open the panel and choose **Assistant settings**. Pick a model provider:

- **Ollama** or **LM Studio** running on your own computer: free and private, because pages and questions never leave the computer. Install one of them, download a model, then click **Load list** and choose it.
- **Anthropic** or **OpenAI** with your own API key. Pages you attach are then sent to that company with your question.

Use it

- Ask about the page: “What are the main arguments?”, “Explain the second paragraph simply.”
- Type **@** to add other open tabs, for example to compare two articles.
- **Skills** start with **/**: `/summarize`, `/keypoints`, `/explain`, `/quiz`, `/sinhala`, `/reply`, `/compare`. Edit them or add your own in Assistant settings; `{{page}}` and `{{selection}}` are filled in automatically.
- Right-click selected text for *Summarise*, *Explain* or *Translate* with the assistant.

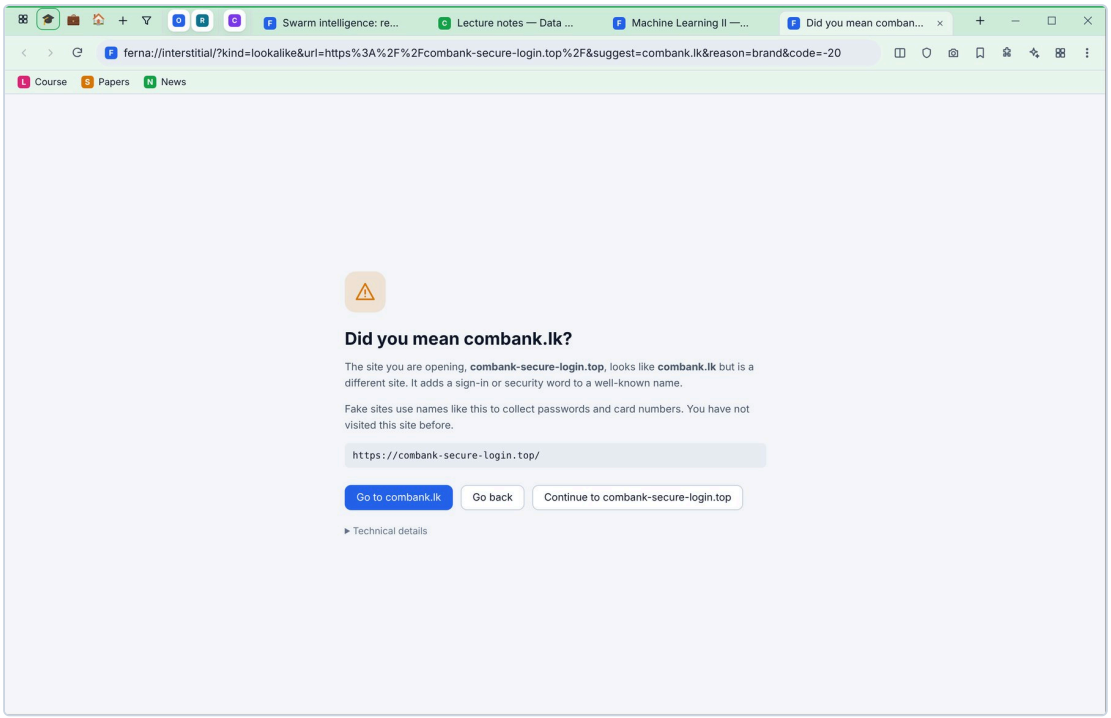

CHAPTER 10

Privacy and security

Ferna Sundaree protects you by default. This chapter explains what it does and the few things you may want to adjust.

What is on by default

Protection	What it does
Ad and tracker blocking	Uses the same lists as uBlock Origin (EasyList, EasyPrivacy and others). Blocks ads, trackers and YouTube ads, and hides empty ad spaces.
Safe browsing	A red warning appears before known phishing and malware sites. The lists are checked on your computer, so no address is sent anywhere.
Look-alike warnings	Warns when an address imitates a well-known site, a Sri Lankan bank or one of your bookmarks (for example *paypa1.com*).
HTTPS-first	Uses secure connections and warns before an insecure page.
Privacy	Blocks third-party cookies, removes tracking tags from links, sends Global Privacy Control, adds noise against fingerprinting, and limits WebRTC.
Pop-up blocker	Blocks windows a page opens without a click from you.
Download scanning	Scans finished downloads with Microsoft Defender (Windows) or ClamAV (Linux).
Sandbox	Each web page runs in Chromium's sandbox, isolated from your files and from other sites.

Look-alike warning: an address pretending to be a bank's login page.

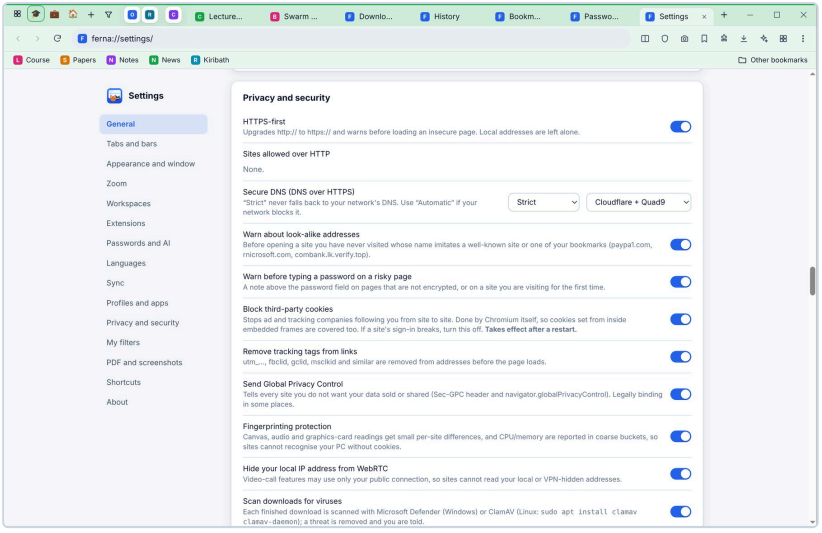

The shield button

The shield shows how many trackers and ads were blocked on the page. Its menu lets you:

- turn blocking off for one site (if a site does not work properly) or for all sites;
- open pop-ups that were blocked, or always allow pop-ups on a site;
- **Hide an element on this page…**: click any annoying box on a page to hide it permanently;
- open **My filters…** to write your own filter rules or add extra filter lists;
- update the filter lists now.

Privacy and security settings

In *Settings → Privacy and security* you can choose secure DNS, how long history is kept, and **enhanced security mode**, which turns off JavaScript optimisation for extra protection. It makes some sites slower.

Settings → Privacy and security.

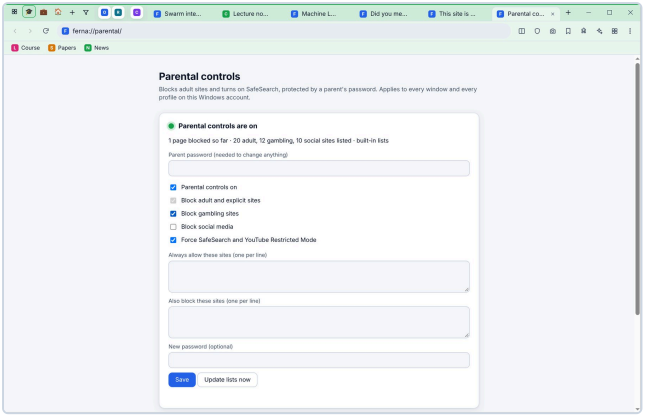

CHAPTER 11

Parental controls

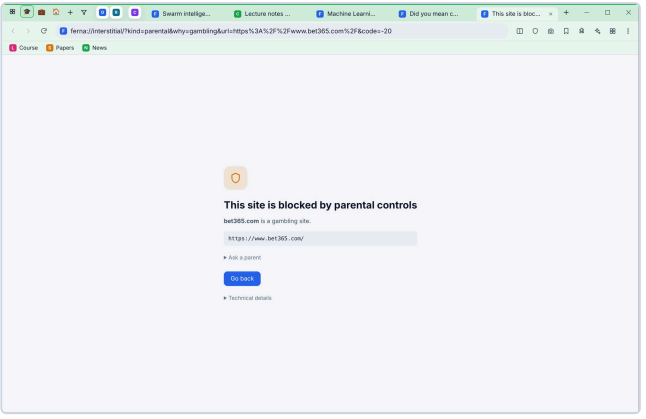

Parental controls block unsuitable sites on every page, in every window and profile, and are protected by a parent's password.

Set up

1. Open *Menu* → *Parental controls…*
2. Choose a **parent password** (at least 6 characters) and type it again.
3. Choose what to block: adult and explicit sites (always on), and optionally gambling sites and social media. Leave **Force SafeSearch** on to filter search results on Google, Bing, DuckDuckGo, Yahoo, Brave Search and Startpage and to use YouTube Restricted Mode.
4. Click **Set up**. Add your own **always allow** and **also block** lists if needed, then **Save**.

Parental controls settings

A blocked site with **Ask a parent**

Daily use

- A blocked site shows a page with **Ask a parent**. With the parent's password, the site can be allowed once or always.
- Private windows, Tor windows, developer tools and adding extensions also need the parent's password.
- The block lists are updated every week.
- To change settings or turn the controls off, open *Menu* → *Parental controls…* and enter the parent password.

> **Limits**
>
> No filter catches everything. Someone with administrator rights on the computer can remove any browser filter. Give a child their own standard (non-administrator) account. For extra protection, also use the parental tools of the operating system (Microsoft Family Safety on Windows) or DNS filtering on your router.

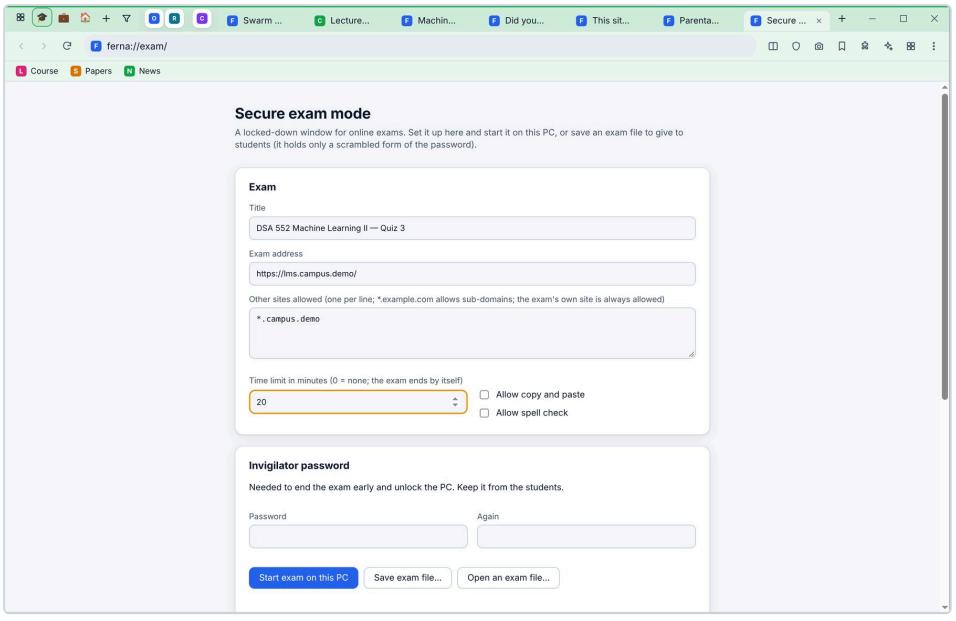

CHAPTER 12

Secure exam mode

Secure exam mode turns the browser into a locked exam window for online quizzes, for example on a Moodle site. It ends only when the invigilator enters a password or the time runs out.

For instructors: create an exam

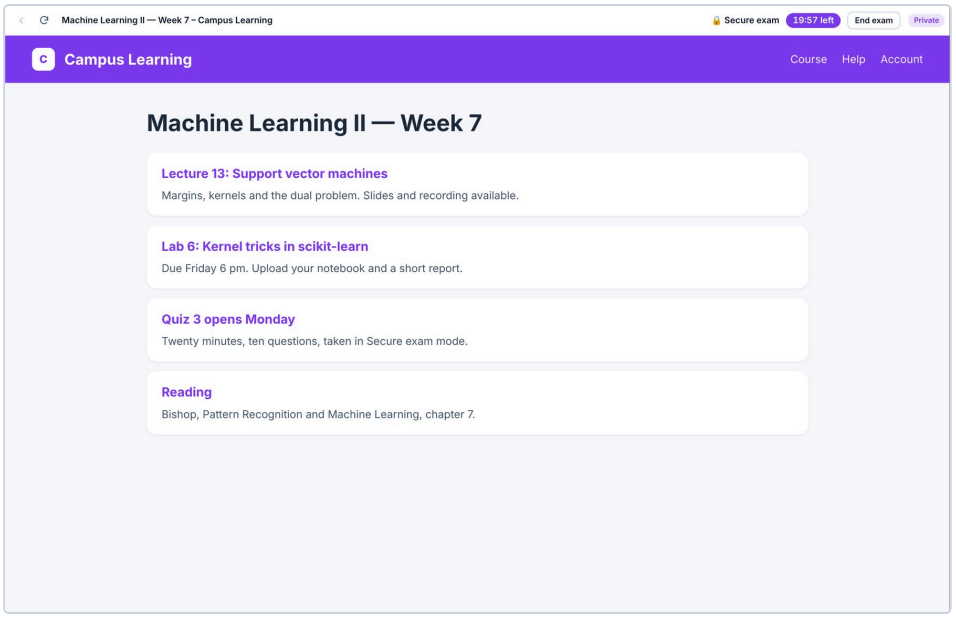

1. Open *Menu → Secure exam mode…*
2. Enter a **title** and the **exam address** (the quiz page).
3. List any **other sites allowed**, one per line. `*.example.com` allows all its sub-domains. The exam's own site is always allowed. Add the university login site if students must sign in.
4. Set a **time limit** in minutes (0 = no limit), and choose whether copy and paste and spell check are allowed.
5. Choose the **invigilator password** and type it again.
6. Click **Start exam on this PC**, or **Save exam file…** to make a `.fernaexam` file to give to students. The file holds only a scrambled form (hash) of the password, never the password itself.

Secure exam mode set-up page.

For students: take the exam

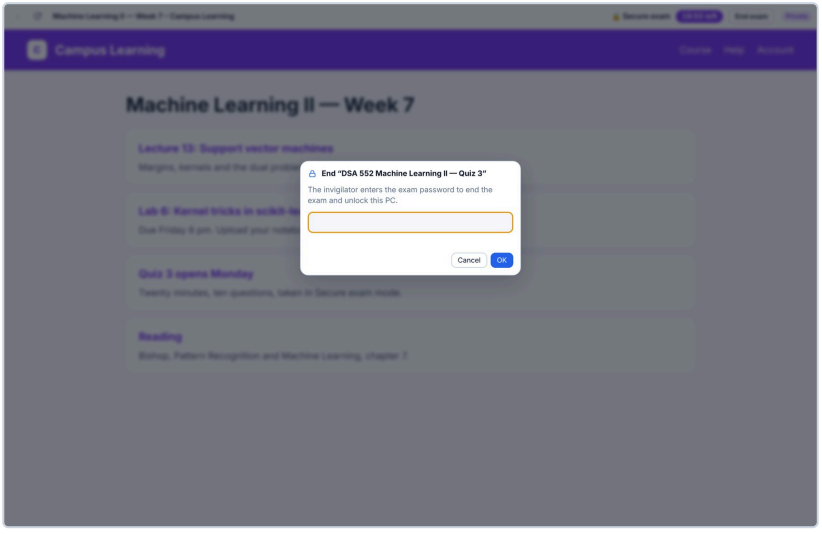

- Double-click the `.fernaexam` file, or use *Menu → Secure exam mode → Open an exam file…*.
- The exam fills the screen and stays on top. Other browser windows are hidden. There are no tabs, address bar, menu, new windows, developer tools, downloads or printing.
- Only the exam and the allowed sites open; anything else is blocked and logged. A timer shows the time left.
- Switching to another program brings the exam straight back, and the switch is logged.

The exam window, with the title, timer and *End exam* button at the top.

End the exam

The exam ends by itself when the time runs out. To end it earlier, the invigilator clicks **End exam** (or presses Ctrl + Alt + Shift + E) and enters the password. Wrong attempts are counted. A log of the session (start, end, blocked sites, window switches) is saved and shown.

Ending the exam needs the **invigilator password**.

What no browser can prevent

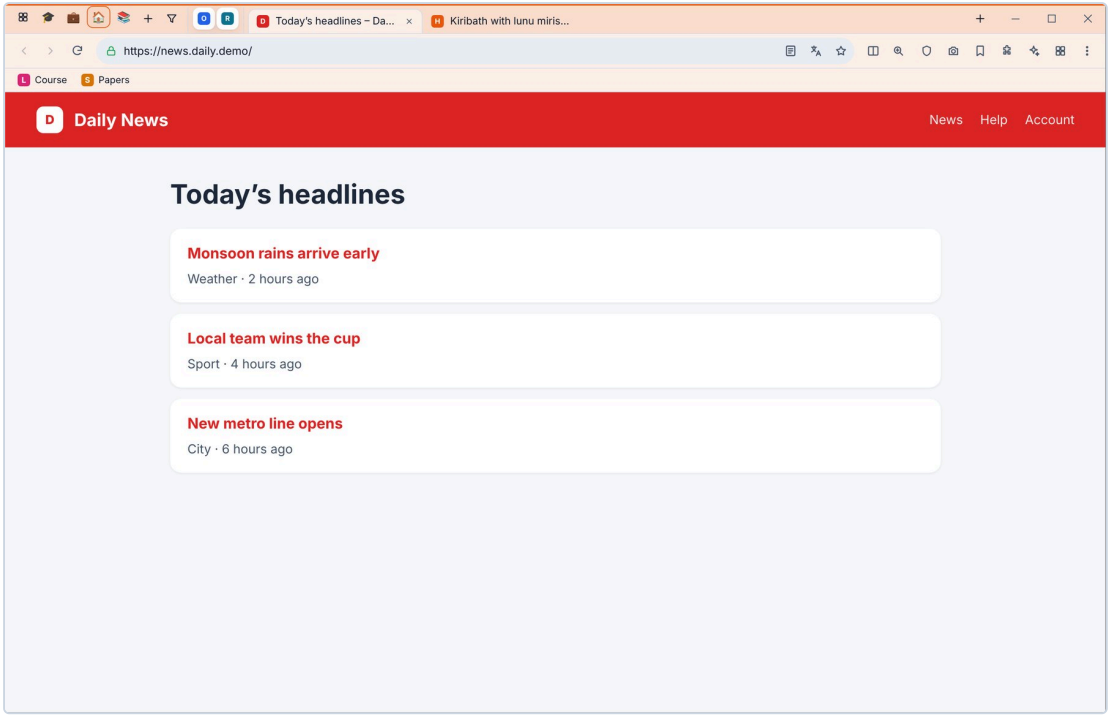

The operating system keeps some keys for itself, such as Ctrl + Alt + Del and Win + L on Windows, and switching to a text console on Linux. Use the log and supervision for those. On Windows, screenshots and screen-sharing programs see a black window. Linux cannot hide a window from them, so remove such programs from exam computers.

CHAPTER 13

Make it yours

Themes and colours

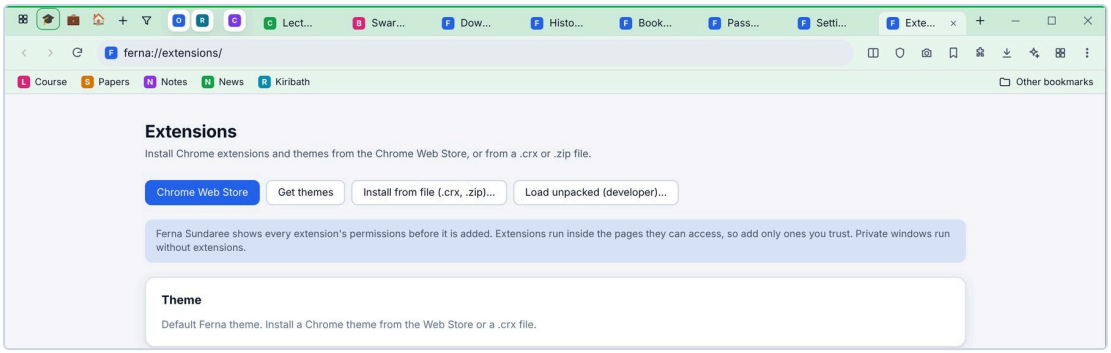

- **Workspace colours** tint the tab bar, toolbar and accent, so you can see at a glance whether you are in Work, Study or Personal.
- **Adaptive colour**: outside a workspace, the bars take the main colour of the site you are on.
- **Dark mode on a schedule** switches to dark in the evening and back to light in the morning, at times you choose.
- **Chrome themes** from the Chrome Web Store recolour the bars and the new tab page (*Settings → Appearance and window → Get themes…*).
- **High-contrast toolbar buttons** keep icons and text readable on any colour (at least 4.5 : 1, the WCAG AA level). Buttons that are on get a solid highlight.

High-contrast toolbar on a yellow workspace: icons stay dark and readable.

Chrome extensions

Open *Menu → Settings → Extensions* (or the puzzle button) and click **Chrome Web Store**. On an extension's page, click **Add to Chrome**. Ferna Sundaree shows the extension's permissions before adding it. You can also install a `.crx` or `.zip` file, or load an unpacked folder. Pin extensions to the toolbar from the puzzle menu. If an update asks for more access, the extension is paused until you agree.

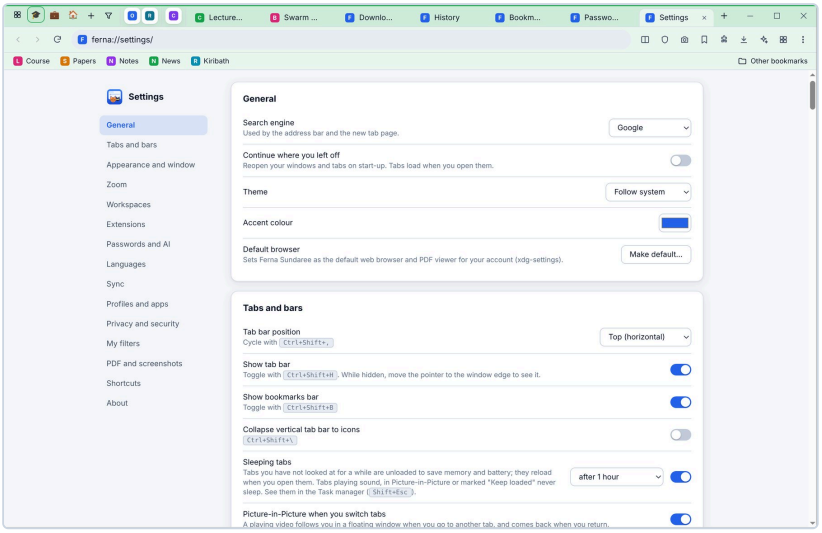

Extensions page.

Install a site as an app

Menu → Install this site as an app… gives a site its own window without tabs or address bar, with its own icon in the Start menu (Windows) or applications menu (Linux) and on the desktop. Links to other sites open in the normal browser. Remove apps in *Settings → Profiles and apps → Installed apps*.

Settings

Menu → Settings groups everything on the left: General, Tabs and bars, Appearance and window, Zoom, Workspaces, Extensions, Passwords and AI, Languages, Sync, Profiles and apps, Privacy and security, My filters, PDF and screenshots, Shortcuts and About. Settings locked by your organisation show a lock.

Settings.

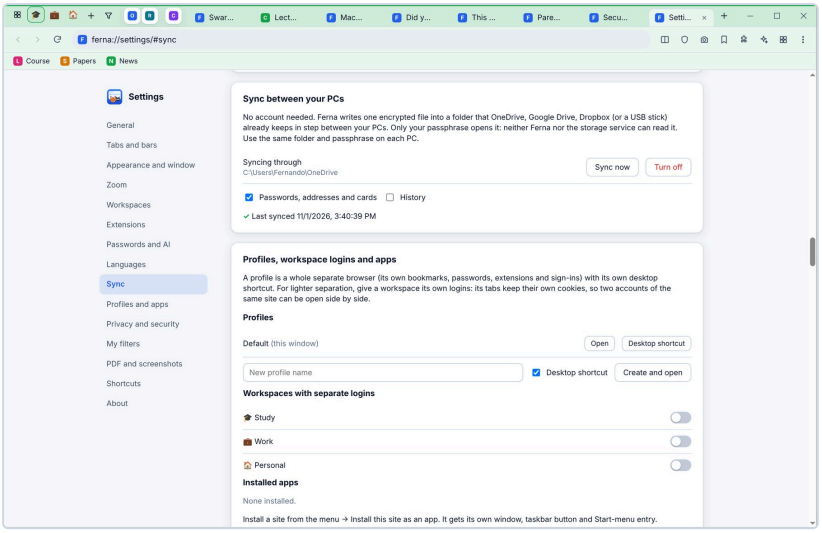

CHAPTER 14

Sync between your computers

Ferna Sundaree syncs without an account. It writes one encrypted file into a folder that OneDrive, Google Drive, Dropbox (or a USB stick) already keeps the same on all your computers.

1. Open *Menu* → *Settings* → *Sync*.
2. Click **Choose…** and pick a folder inside your OneDrive, Google Drive or Dropbox folder.
3. Type a **passphrase** of at least 10 characters and write it down. There is no way to recover it.
4. Choose whether to include **passwords, addresses and cards** and **history**. Bookmarks, workspaces and settings are always included.
5. Click **Turn on sync**. Do the same on your other computers with the same folder and passphrase.

Changes made on different computers are merged. Only your passphrase opens the file: neither Ferna nor the storage company can read it. **Sync now** syncs immediately, and **Turn off** stops syncing.

Sync turned on through a OneDrive folder.

CHAPTER 15

Updates and help

Updates

Ferna Sundaree checks for updates every six hours, on GitHub and on the Ferna update mirror. Chromium security fixes are released about once a week, so expect a small update most weeks. It installs only updates signed with the Ferna project's key whose files match the signed checksums. When an update is ready, a message appears and the menu shows **Restart to update**. Check by hand in *Settings → About → Check now*.

Where your data is kept

System	Folder
Windows	`%LOCALAPPDATA%\FernaSundaree\Profiles\Default`
Linux	`~/.config/FernaSundaree/Profiles/Default`

Bookmarks, history, the open session and passwords are stored encrypted (Windows: your Windows account; Linux: your login keyring). Other profiles have their own folders next to *Default*.

Common questions

Question	Answer
A site does not work properly.	Click the shield and turn blocking off for that site, then reload. If it still fails, try a private window.
Where did my tab go?	It may be in another workspace, or hidden by the filter. Use Tab Overview (Ctrl + Shift + A) or click **All tabs**.
The bars disappeared.	Focus mode or a hidden tab bar is on. Press Ctrl + Shift + F or Ctrl + Shift + H, or rest the pointer on the window edge.
Can I use Netflix or Spotify's web player?	Sites that need Widevine copy protection do not play in this edition. A separate Streaming edition is planned.
I forgot the parent or invigilator password.	Passwords are stored only as a scrambled hash and cannot be recovered. Ask the person who manages the computer. For an exam, let it end by its time limit, and make a new exam file with a new password.
I forgot my sync passphrase.	Turn sync off, delete the sync file in the folder, and set up sync again with a new passphrase.
